

Attention EklinRead Users

This workstation is now configured to use **RemedyView**, a new platform for submitting cases to the radiologist. RemedyView is similar to EklinRead, except that it is Web-based. That means you will sign in and interface with cases on web pages alongside eFilm. Reports are displayed in separate web windows, so users need to know how to close reports without closing the worklist.

Quick Start Guide

1. Open RemedyView from the Windows Desktop launch icon:

Remedy

2. Sign in using your hospital's username & password:

Username: _____

Password: _____

This will bring you to your RemedyView worklist.

3. Use the "Create Report" button in eFilm to open and submit a new case on an open study. Use the "View Report" button in eFilm to view an existing case on an open study.

4. In the RemedyView worklist, you can see your hospital's cases listed. Highlight any case by clicking on it and you can get an action menu by moving your mouse over the left arrow on right:

ST	Patient ID	Clinician	Account	Status	Modified	
	ASHLEY	Dr. No	Andy Fu		07/31/2010 2:	 View Report...
	547562	Jon Eric	Andy Fu		07/31/2010 2:	Open Image...
	50171	John	Andy Fu		07/29/2010 3:	Addendum...
	1234	Dr. Fronzenfar	Andy Fu		07/29/2010 2:00:5pm	

5. You can see the status of each case by moving your mouse over the icon in the **Status** column:

 - Active. Read request is submitted, not yet opened by radiologist

 - Locked. Read request has been opened by radiologist.

 - Completed. Read request is completed by radiologist.

Note: Icons with a tiny "A" mean the report has one or more addendums.

Icons in the **ST** (stat) column:

 - Normal urgency

 - Stat
